Visiting an old school de gales cracked open just the same. You learn the same person who was talked through them the hallway seems narrower detect smaller divorce somehow carter you create your step past the classroom each door way holding echoes of jog burst laughter. Anxious anticipation teacher voices rang in your memory blending videos kind of almost. One outflows you passed by the noticeable nose filled with unfamiliar names. Faces. Felt this cringe sting of being bought up part of this place. Apart from the bell rang. For a moment you expected to join the crowd again. You didn't you'd work you are just a visitor now you vote out slowly carrying more than nostalgia getting the route the route they're the places that shaped us never stopped existing even when we are outgrown their balls.

Performance Assessment

Overall Performance Score

52.7/100

Performance Level: Average

You demonstrate typical speaking abilities with both strengths and areas needing improvement. Focus on your recommendations to stand out more effectively.

Your Strengths

Fluency: Minimal filler words

Your speech contains only 0.7% filler words, demonstrating strong verbal fluency.

To enhance: Continue practicing prepared speaking to maintain this strength and extend it to impromptu situations.

Fluency: Smooth delivery

Your speech flows naturally with minimal hesitation or repetition.

To enhance: Continue building confidence through regular practice, especially with impromptu speaking situations.

Structure: Optimal sentence length

Your average sentence length of 16.7 words strikes a good balance between complexity and clarity.

To enhance: Continue varying sentence length for rhythm - use shorter sentences for emphasis and slightly longer ones for explanation.

Growth Areas

Pitch variability

Speaking pace

Strategic pausing

Priority Improvements

1 Pace: Rapid speech rate

High - This fundamentally affects how your message is received

2 Volume: Low overall volume

High - This fundamentally affects how your message is received

3 Pauses: Insufficient pausing

Medium - This affects how well your content is understood and organized

Improvement Recommendations

Voice: Low pitch variability

Your voice has limited pitch variation which may sound monotonous.

 **Suggestion:** Try to add more vocal variety by emphasizing important words and phrases with a change in pitch. Practice by reading text aloud and deliberately varying your pitch on key words.

Recommended Exercises:

- Mark up a script with arrows indicating where to raise or lower your pitch
- Record yourself reading a children's story with exaggerated expression, then tone it down for normal speech
- Practice saying the same sentence with different emotions to naturally vary pitch

Voice: Limited pitch range

Your voice stays within a narrow pitch range, which may limit expressiveness.

 **Suggestion:** Expand your comfortable pitch range through vocal exercises. Try speaking at slightly higher and lower pitches than you normally use.

Recommended Exercises:

- Practice scale slides (gliding from low to high pitch and back)
- Read passages using different character voices
- Try humming at different pitches before speaking

Pace: Rapid speech rate

You're speaking at 5.7 words per second, which might make it difficult for listeners to follow.

 **Suggestion:** Practice slowing down, especially when explaining complex ideas. Try using more strategic pauses.

Recommended Exercises:

- Record yourself reading text while following along with a metronome set to a slower pace
- Place punctuation marks on your script and pause briefly at each one
- Practice breathing techniques to naturally slow your pace

Pauses: Insufficient pausing

You're averaging only 4.4 pauses per minute, which can make your speech feel rushed.

 **Suggestion:** Add strategic pauses after important points to give listeners time to process information.

Recommended Exercises:

- Mark your script with '/' where you should pause
- Practice the 'Think and speak' technique: pause, think about what you'll say, then speak
- Count '1-2' silently after making important points before continuing

Volume: Low overall volume

Your speech volume is generally low, which may make it difficult for listeners to hear you clearly.

 **Suggestion:** Work on projecting your voice from your diaphragm rather than your throat to increase overall volume without strain.

Recommended Exercises:

- Practice diaphragmatic breathing exercises
- Stand up straight and imagine speaking to someone at the back of the room
- Use the 'counting exercise': count from 1-10 with increasing volume

Development Plan

Next Steps

1. Practice the specific exercises recommended for your top 3 priority improvement areas
2. Record a speech before and after implementing recommendations to track progress
3. Focus on incorporating one new technique per week rather than trying to fix everything at once

Growth Pathway

Foundation

Focus Areas:

- Eliminate major distractions (excessive fillers, extreme pace issues)
- Develop basic speech structure (clear intro and conclusion)

Exercises:

- Record short 1-minute speeches daily focusing on eliminating your most common fillers
- Practice speaking with a metronome to regulate pace
- Create and use speech outlines with clear introduction, body, and conclusion sections

Milestone:

Deliver a 3-minute speech with less than 3% filler words and clear structure

Enhancement

Focus Areas:

- Improve vocal variety (pitch, volume, pace variation)
- Develop strategic pausing
- Refine sentence structure for clarity

Exercises:

- Practice reading expressive texts with exaggerated vocal variation then tone down to natural levels
- Mark pauses in scripts and practice different pause durations
- Rewrite complex sentences into clearer, more concise versions before speaking
- Practice reading the same text with different emotional tones to develop pitch range

Milestone:

Record a 5-minute speech applying vocal variety and strategic pauses

Refinement

Focus Areas:

- Add rhetorical techniques for emphasis
- Use metaphors and analogies to illustrate points
- Improve transitions between sections

Exercises:

- Study speeches you admire and identify rhetorical devices they use
- Practice creating metaphors for abstract concepts in your field
- Build a transition phrase library for different purposes (comparison, contrast, sequence)

Milestone:

Deliver a speech incorporating at least 3 rhetorical devices and 2 memorable metaphors

Progress Tracking

Select one recommendation to focus on each week

Metrics to Track:

- Speaking rate (target: 2.5-4.0 words per second)
- Pauses per minute (target: 8-12 pauses)
- Practice frequency (target: at least 3 sessions per week)
- Speech duration (gradually increase as you improve)

- Audience feedback ratings (collect ratings on a 1-10 scale for clarity and engagement)
